# SPA PIPE SANITISER BIOCIDE

## Health Department Advice on Spa Baths

- Spa baths don't have filter systems - Spa baths circulate water through pipes
- Body fats + soap + other deposits block pipes, nozzles and outlets, and become a serious hygiene problem
- Grease and other debris provides harbourage for bacteria, fungus, moulds associated with ear, eye, hair, respiratory and infection of body parts
- Circulating water does not remove fats or Oils
- **MUST USE** degreasing solutions to remove fats and oils

## In Room Spa Baths - Facts

- The therapeutic value of spa baths is widely accepted - users enjoy relief from chronic pain, physical discomfort and gain a sense of well being.
- Spa Bath sales are more than **100,000** units per year and growing
- Spa Bath pipes average **5 to 6** metres and are in need of regular cleaning....they do not have a filtering system

*The solution...*

### ❖ **Use a commercially formulated spa pipe degreasing product**

- When used correctly Spa Safe should remove body fats and oils etc.
- Debris normally brown in colour – you may be surprised at the amount that floats to the bath surface
- Choose a degreaser that also has a sanitising action so that pipes remain hygienically clean until bath is used again
- Degrease your spa bath frequently for comfort and enjoyment for your family and each guest between or after each room stay is recommended

### EASY STEPS FOR SPA BATH CLEANING

1. Fill bath with cold water to above jet line.
2. Add **50mls** of Spa Safe to the spa water then turn jets (pump) on.
3. Run jets for **5-10 minutes**. Very dirty pipes will require a longer time.
4. Turn the jets off and drain bath. Rinse the bath with cold water.
5. Using Spa Safe on a clean, damp cloth wipe bath surface and surrounding area.
6. Polish the bath with a clean, dry cloth for a sparkling shine.
